

OVERVIEW OF ANSWERS FOR DISTRIBUTION OF ANSWERS BY COUNTRY IN ALPHABETICAL ORDER. PERCENT AND FREQUENCY. FOUR TREATMENTS INCLUDING TABLE 1 FOR 2 YEARS, TABLE 2 FOR 4 YEARS, TABLE 3 FOR 6 YEARS, AND TABLE 4 FOR 8 YEARS.

The global data is collected as a part of Gallup World Poll. The research was conducted across 60 nations from September 2020 to February 2021, engaging representative samples of on average 1000 participants per country, culminating in a total of 66,214 responses. This comprehensive sample covers 85% of the global population and 90% of the world's GDP, including 10 nations from Western Europe, 8 from Eastern Europe and Central Asia, 7 from the Middle East and North Africa, 11 from Sub-Saharan Africa, 11 from the Americas, 4 from South Asia, and 9 from Southeast Asia and the Pacific. Responsible researcher for designing this part of the survey is Prof. [BLINDED].

Introduction

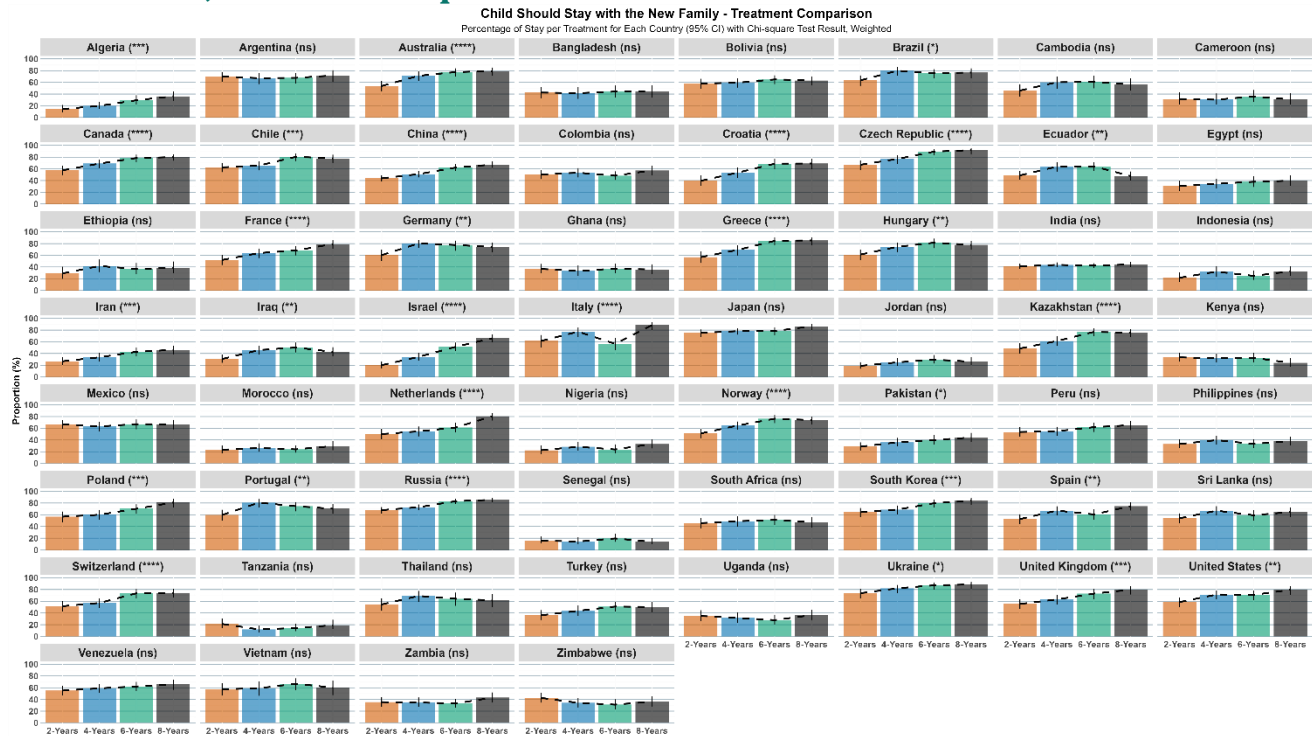

Within the present study, several experimental questions were used to examine if there are treatment effects. The experiment is conducted so that treatments are randomized into the sample of respondents, which should result in an equal distribution of respondents and respondent characteristics within each treatment group. This document shows the results distributed for the «family» treatment.

Figure A1: Map on the Distribution of Answer for Stay per Treatment

Notes: The figure shows the percentage of observations that answered "Stay" for vignette with child living for 2, 4, 6, and 8 years with social kin in respective panel. The colors represent in which range of percentages they are in. Country colored in white is not surveyed. Proportion's calculation excludes observations that answered the option "Don't Know" and "Refused to answer". Weighted data is used for the analysis.

Figure A2: Distribution Comparison on the Decision to Stay for Each Treatment, World. Chi square.

Notes: The figure shows the distribution comparison of Child staying with social kin with 95% confidence interval for vignette on each treatment for each country. Dashed lines represent the difference of proportion from one treatment to another. Proportion calculation excludes observations that answered the option “Don’t Know” and “Refused to answer”. Chi-square test between the treatment and choice of Stay/Leave was conducted, with result in statistical significance shown beside the country name. Weighted data is used for the analysis. ns = not significant, *p < 0.05, **p < 0.01, ***p < 0.001, ****p < 0.0001.

Table 1 - Distribution of answers by country, treatment 2 years. Percent and n.
